

HEARING LOOP DIRECTORY OF MANUFACTURERS/INSTALLERS

(Listed alphabetically by state/country)

UPDATED: January 27, 2015

The information below has been provided by the companies to Hearing Loss Association of America® (HLAA). HLAA has not vetted these companies. Inclusion is based on their assurances to us that they use the international induction loop standard (IEC-60118-4) for installation. This standard ensures strong, even coverage of the signal. We suggest you ask potential installers whether they offer engineering expertise to meet this standard and can verify that they have done so. This will prevent dissatisfaction with uneven, poor quality installations and will delight users with clear, strong input wherever they sit.

We also understand that in some jurisdictions loop systems are required to be listed by Underwriters Laboratories Inc. (UL). UL is an independent product safety certification organization. Not all jurisdictions require UL listing. Ask the potential installers whether they can verify that they meet all applicable laws and regulations.

Inclusion does not mean Hearing Loss Association of America has endorsed or vetted these installers, nor should exclusion suggest disapproval.

ARIZONA

Tech-Unique Electronics provides high intelligibility speech sound systems for average and less than average hearing clients ranging from private to government. Our induction loop system venues are pretested for viability with a subsequent *final magnetic field survey* performed for certification to IEC 60118-4. In addition to design and consulting services our product lines include paging and signage alert systems for the deaf and hard of hearing. We have serve Arizona since 1988.

NEW YORK

Acoustic Loop Innovations – we install home and commercial induction loop systems adhering to the IEC 60118-4 standard. Since our company is directed by an audiologist, it is our mission to provide better hearing for people with hearing loss by advocating for a simple, yet amazing system. After installation of each loop system, the venue (home or commercial) will receive training by an audiologist to ensure that the system will be used appropriately and that the user of the hearing device understands how to activate the T-coil.
