

Please advise me if my hearing aid(s) have telecoils. If they do, please activate and program them so I can use them in a hearing loop. Also, please write instructions on the back of this card. If I don't have a telecoil(s), can it be installed or is there a remote control/streamer telecoil option?

Program Recommendations

For open RIC fittings: manual T only program

For close/occluded fittings: manual M +T program in social settings

For close/occluded fittings: manual T only program for high noise environments like airports or train stations

Verify Mic and T-coil responses **match** in gain, output and frequency response in user programmed mode (use ANSI-SPLIV test procedure)

Programming questions?

Contact: Juliëtte Sterkens, Au.D., jsterkens@hearingloss.org

I would like to use my telecoil(s) in a hearing loop.

Please write clear instructions on how to access them in my hearing instrument(s):

For example: The position of the program, number of beeps or voice prompt, and location of the switch to activate the t-coil.
